

Dear Hiring Manager,

I'm excited to apply for the Software Engineer position supporting WorkWave through IGT1. The combination of React front-end work, .NET backend architecture, and an AI-driven development workflow is a strong match for both my technical background and how I already prefer to work.

I hold a BSc (Hons) in Information Technology from the University of Moratuwa and have professional experience as a Software Engineering Intern and later Associate Software Engineer at Hasthiya IT, building web applications with React and TypeScript and developing REST APIs across several backend stacks. Alongside this, I built LifeLink Lanka, a full-stack blood donation and emergency network platform, using .NET 8 and Angular with SignalR for real-time alerts, multi-factor authentication, and role-based access control, giving me direct, practical experience navigating and building within a .NET backend, alongside my strength in React.

AI-assisted development is already a core part of how I work day to day, I use tools like Claude Code regularly for drafting, refactoring, debugging, and accelerating development, and I've found real value in learning to steer these tools effectively rather than treating them as a black box. I'd bring that same mindset to your AI-driven SDLC, and I'm genuinely drawn to a team that's building its workflow around this rather than treating AI tooling as an afterthought.

I've also led backend architecture work on TruthLens, my final-year research project, orchestrating five parallel microservices behind a Flask gateway, and contributed to Cloudmart, a production-style e-commerce platform on AWS using Kubernetes and Terraform, both of which sharpened my ability to reason about system design and deliver working software in a team setting.

I take real initiative in building my own skills, LifeLink Lanka is a good example, built specifically to deepen my hands-on experience with .NET and Angular, and I bring that same drive to every project I take on.

I'd welcome the opportunity to discuss how I can contribute to the WorkWave team.

Thank you for considering my application.

Sincerely,

Dasun Madusanka
